

Getting started with kilo™

For the initial startup, you will need to connect to a Wi-Fi network (have the network name and password available) and a Bluetooth® enabled mobile phone.

1. Ensure you have the necessary permissions to register

Only users with admin permissions can register robots to the fleet. Check your email for an invitation; this invite will specify whether you are an “admin” or a “user.”

2. Charge robot for at least 10 minutes

Remove the charger from the accessories box. Plug the charging cable into the charging port at the front of the robot and the power cable into a wall outlet.

3. Install the PFF pro™ app and create your account

Download the **PFF pro** app from the App Store or Google Play Store. Sign into the app using the username and the temporary password that was included in the invitation email. Once signed in, you will be able to update your username and password.

4. Power on the robot

Press and release the power button on the front of the robot, above the charging port. The **Follow button** light will pulse while the robot starts up.

5. Follow the instructions in the app to complete set up

In the **PFF pro** app, you will see a list of robots associated with your account. Select the robot you wish to set up and follow the step by step instructions on the app. Should you have trouble setting up your robot, please contact **Customer Care at (800) 791-0843**.

Your first walk with kilo™

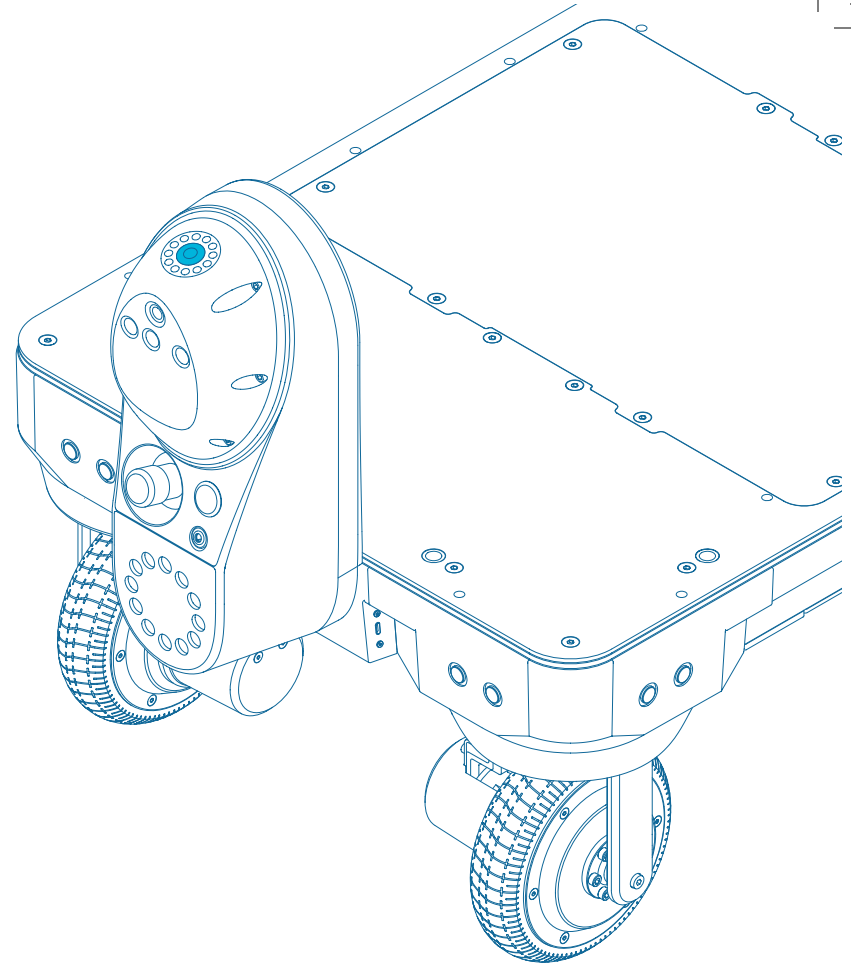

Depending on your company's configuration settings, you may need to first use the **PFF pro app** to check out the kilo you wish to use. Open the app, choose the robot you would like to use and swipe to check it out. Once the robot is checked out in the app, stand in front of the robot and touch the **Follow button**. If your company does not require robots to be checked out, simply stand in front of the robot and touch the **Follow button**. The robot will pair with you, indicated by a sound and lighting cues.

Turn around and walk away, the robot will follow you.

To end your walk, touch the **Follow button** again. The robot will stop following. Use the app to return the robot to the fleet pool, if you checked it out.

*To continue your journey with your robot,
make sure to read the user manual.*
